Edition 1.0 · November 2026
For US small businesses and solo service pros

About this free module

This is **Module 1** of **The One-Click Business Spreadsheet**, a ready-made Google Sheet with built-in automations for invoices, receipts, statements, quotes, reminders, mileage, expenses and leads, plus a short course on customizing it with an AI assistant.

Module 1 is free so you can see exactly how setup works before you buy, including the Google permission screens.

WHAT YOU NEED FROM THE FULL KIT

The steps below use the **copy link** (Option A) or the **workbook and code files** (Option B). Both come with the full kit. Read along now, and you will be set up in about 15 minutes once you have them.

BUSINESS GUIDANCE ONLY

This guide is general business guidance, not tax, legal or accounting advice. Email, Maps and other daily limits are set by Google and can change.

01

MODULE · FREE PREVIEW

Set up your spreadsheet in 15 minutes

Goal: Get your own copy of the spreadsheet, give it permission to work, fill in your business details and send your first test email.

IN THIS MODULE

- Getting your copy with one click
- The Google permission screens, including the "unverified app" warning
- Filling in Settings
- Test mode and your first test email
- What not to touch, and clearing out the sample rows

TIME
About 15 minutes

YOU'LL NEED
A Google account and a computer with a web browser

YOU'LL WALK AWAY WITH
A working Business Tools menu, your own invoice templates in Google Drive, and Test mode switched on

Step 1: Get your copy

Your spreadsheet comes with all the automation code already built in. There is nothing to install, import or paste.

1. Open `START-HERE.md` from your download and click the **copy link** while you are signed in to your Google account. (On a computer with more than one Google account signed in, open the link in the browser profile of the account you want to use.)
2. Google shows a **Copy document** screen. It mentions that the file has *attached Apps Script files*. That is the automation code, and it is supposed to be there. Click **Make a copy**.
3. Your copy opens in Google Sheets and is saved in your own Google Drive. Rename it if you like (click the title at the top left). This is your spreadsheet now: bookmark it.
4. Wait about 10 seconds, then look at the menu bar. You should see a new menu called **Business Tools** to the right of **Help**. If not, reload the page.

THE ROWS ALREADY IN YOUR SHEET ARE SAMPLE DATA

Your copy comes with a few made-up rows so you can practice before a real client sees anything: clients **Alex Rivera**, **Jordan Lee**, **Sam Patel**, **Casey Morgan**, **Taylor Brooks** and **Riley Chen**, quotes for **Morgan Diaz** and **Drew Kim**, a website message from **Sample Visitor**, and a handful of expenses. The emails all end in `@example.com`, so nothing can reach a real person. Play with them while **Test mode** is on. When you are done testing, delete them (see "Clear out the sample rows" at the end of this module).

SET YOUR TIME ZONE

Dates on invoices and the time reminders go out both follow the spreadsheet's time zone. Click **File > Settings**, check that **Time zone** is yours (for example "(GMT-05:00) Eastern Time"), and click **Save settings**.

Step 2: Run first-time setup

1. Click **Business Tools > Setup and help > 1. Run first-time setup**.
2. Google opens an **Authorization required** box. Click **OK** (or **Review permissions**).
3. Pick your Google account.
4. Now you will probably see a screen that looks scary. Read the next box before you click anything.

"GOOGLE HASN'T VERIFIED THIS APP"

Google shows this warning for **every** script that a person writes for their own use and has not sent to Google for a formal review. It is normal for small business scripts like this one. The "app" is the code inside **your own copy** of the spreadsheet, running in **your own** Google account.

To continue:

1. Click **Advanced** (small text at the bottom left).
2. Click **Go to One-Click Business Spreadsheet (unsafe)**. The name may differ slightly.
3. On the next screen, if you see checkboxes, tick **Select all**. Then click **Continue** or **Allow**.

Only do this for a copy you made from the link in your official download. Never approve this screen for a spreadsheet a stranger sent you.

What the permissions are for

Google says the script wants to...	Why the kit needs it
See, edit, create and delete your spreadsheets	Read your jobs and write the status columns
See, edit, create and delete your Google Docs	Build and fill your invoice templates
See, edit, create and delete your Google Drive files	Make the PDFs and save copies in one folder
Send email as you	Email invoices, receipts and reminders from your Gmail
Connect to an external service / run when you are not present	Daily reminders, driving distance for mileage
Display content in Google apps	The pop-up boxes and the statement sidebar
View and manage your forms	Only used if you create the customer intake form

The script runs only inside your account. Nobody else, including Cody J Web Studio, can see your data or send email from it.

5. After you allow access, the setup box asks **Run first-time setup?** Click **Yes**.
6. In about 20 seconds you get a **Setup complete** message with a link to a new Google Drive folder. Inside are four Google Docs: your invoice, receipt, statement and quote templates.

IF YOU GET STUCK

"I clicked Allow but nothing happened." Click **Business Tools > Setup and help > 1. Run first-time setup** again. The first click after authorizing sometimes only finishes the permission step.

"It says permission denied or authorization is required." You may have unticked a box. Run setup again and choose **Select all**.

"I use a work or school Google account and it says the app is blocked." Your organization's admin controls which scripts can run. Ask them, or use a personal Gmail account for the kit.

"I can't find the Business Tools menu." Reload the page and wait 10 seconds. Make sure you are in **your copy** (the one in your Drive), not the original link. On a phone, menus do not show: do setup on a computer.

"The copy link says I need access." Sign in to Google first, then click the link again. If it still fails, email the address in Reference C and we will send you a fresh link.

Step 3: Fill in Settings

Open the **Settings** tab. Column A is the setting, column B is **your value** and column C explains it. Fill in the **yellow** cells first:

- **Business name**, **Your name**, **Business email (replies go here)**
- **Business phone**, **Business address**, **Website** (leave any of these blank to hide them)
- **Home base address (for mileage)**: where your trips start
- **IRS mileage rate**: already filled in with the 2026 rates; see Module 5

Everything else has a sensible default you can change later. Do not change the words in column A. The kit looks for them exactly.

TEST MODE

Test mode (emails come to you) starts as **Yes**. While it is Yes, every email the kit sends goes to **you**, with `[TEST for client@email.com]` at the start of the subject. Status cells say `TEST:` so a test never blocks the real send later. Switch it to **No** when you are ready for clients to receive emails.

Step 4: Send a test email

1. Click **Business Tools > Setup and help > 2. Send me a test email**.
2. Check your inbox (and spam folder). You should see "Test from The One-Click Business Spreadsheet".

⚡ **YOUR FIRST INVOICE (STILL IN TEST MODE)**

1. Open the **Jobs** tab and click any cell in the last sample row (Riley Chen).
2. Click **Business Tools > Send invoice (selected row)**.
3. Read the summary box and click **Yes**.
4. Open your inbox: there is a PDF invoice with your business name on it. Look at the **Invoice Status** column: it now says `TEST: Invoice sent to you on` today's date.

A 2-minute tour of the tabs

Tab	Use it for
Start Here	The short version of this module
Settings	Your details, email wording, reminder timing, rates
Jobs	One row per job: the heart of the kit
Clients	Your customer list
Quotes	Estimates before the job
Appointments	Upcoming visits for reminders
Expenses	Business purchases
Leads	Website form messages
Dashboard, **Tax Summary**, **Mileage Summary**	Reports the kit rebuilds for you
Log	Everything the kit sent, and any errors

MOVE COLUMNS FREELY

The kit finds each column by the **header name in row 1**, not by its letter. You can drag columns around, hide them, or add your own columns (like "Gate code"). Just do not rename the kit's headers.

WANT BIG BUTTONS INSTEAD OF A MENU?

Click **Insert > Drawing**, draw a rounded rectangle with a label such as "Send invoice", click **Save and close**, then click the drawing's three-dot menu, choose **Assign script** and type `sendInvoiceForSelectedRow`. The full list of names is in Reference A.

What not to touch

Setup adds a safety net to the few places the buttons depend on. You can still type anywhere; these areas just ask first.

Area	Why it matters
Row 1 headers on Jobs, Clients, Quotes, Appointments, Expenses, Leads and Log	The kit finds each column by its header name. Rename one and the buttons cannot find it.
The **Total** column on Jobs and Quotes	It holds a formula that adds up Amount 1 to 3. Type in the Amount columns instead.
Column A of Settings (the setting names) and the **section label rows** (like YOUR BUSINESS)	The kit looks for each name exactly. Type your details in **column B**, which is not protected.
The whole **Dashboard**, **Tax Summary** and **Mileage Summary** tabs	The menu rebuilds these, so any edits there get replaced.

THE WARNING POP-UP

If you edit one of these areas, Google shows a box that says **"Heads up! You're trying to edit part of this sheet that shouldn't be changed accidentally."** Nothing is locked: click **Cancel** to back out, or **OK** if you really meant it. Tick **"Don't show this again for 5 minutes"** if you are doing a batch of changes. The kit's own buttons never see this box. You can see every protected area under **Data > Protect sheets and ranges**, and re-apply the safety net any time with **Business Tools > Setup and help > Protect headers and formulas (warning only)**.

CHANGED SOMETHING BY MISTAKE?

Press **Ctrl+Z** (**Cmd+Z** on a Mac) right away. For older changes, click **File > Version history > See version history**, pick a time before the mistake, and click **Restore this version**. Lost a tab or a header? Run **Business Tools > Setup and help > 1. Run first-time setup** again: it puts back missing tabs and column headers without touching your data or your templates.

Clear out the sample rows

When you have finished practicing in Test mode:

1. Open the **Jobs** tab. Click the row number **2**, then hold **Shift** and click the row number of the last sample row, so all the sample rows are selected.
2. Right-click one of the selected row numbers and choose **Delete rows 2 - 9** (the numbers match your selection). If the warning pop-up appears, click **OK**.
3. Do the same on **Clients**, **Quotes**, **Appointments**, **Expenses** and **Leads**.

4. Keep **row 1** (the headers) on every tab, and keep the **Settings** tab exactly as it is. Leave **Log** as it is too, or delete its rows the same way.

Your first real invoice then starts at the **Starting invoice number** on Settings (1001 unless you change it), and your first quote at the **Starting quote number**. The Dashboard and summaries are formulas over whole columns, so they keep working with empty tabs. The **Total** formula is added to new rows for you the first time you send an invoice or quote from them.

RECAP

- [ ] You made your own copy from the link and see the **Business Tools** menu
- [ ] You approved the permission screens (Advanced > Go to... > Select all > Allow)
- [ ] The yellow Settings cells have your details
- [ ] Your test email and your first test invoice arrived
- [ ] Test mode is still **Yes** while you explore
- [ ] You know the warning pop-up is the kit's safety net, and how to restore with **File > Version history**
- [ ] When you finish testing, you delete the sample rows (row 2 down) and keep the headers and the Settings tab

THE FULL KIT

Get The One-Click Business Spreadsheet

The ready-made spreadsheet with all the automations built in, the templates, the website form and the full guide.

$29 one-time purchase, instant download

All 9 modules

- ✔ **Module 1: Set up your spreadsheet in 15 minutes** YOU HAVE THIS
- ✔ Module 2: Invoices, receipts and "Pay now" links
- ✔ Module 3: Monthly statements and quotes
- ✔ Module 4: Reminders that run themselves
- ✔ Module 5: Mileage, expenses and your profit dashboard
- ✔ Module 6: Catch every lead: website form and intake form
- ✔ Module 7: Customize anything with an AI assistant
- ✔ Module 8: Fix any error in five minutes
- ✔ Module 9: Google's limits, privacy and going live

In the download

- One-click copy link for the ready-made Google Sheet, with every automation already built in and sample data to practice on
- Every script as an easy-to-read text file, for customizing with AI
- Invoice, receipt, statement and quote templates
- A copy-paste website contact form

In the guide

- Step-by-step setup for each feature
- Copy-paste AI prompts to customize the code
- The "fix the error" workflow and troubleshooting
- Google's daily limits explained
- Menu, button and tag reference
